# Conveyor Series

---

The HAC Series is a family of height-adjustable conveyors that move heavy parts with ease, preventing employee strain and injury.

With lift power of up to 400 pounds, BUILT Systems conveyors can be paired with our assembly tables to create a production work flow that adjusts to each individual's ideal working height at the touch of a button.

## Custom

---

Our conveyors are height adjustable, so they fit every user. By focusing on employee ergonomics, you can expect productivity to increase and compensation costs to decline.

These conveyors can be programmed to raise and lower in sync with other electronically height-adjustable workstations from BUILT Systems.
