BLACK WRINKLE

Material Handling Series

A flat cart with a built-in electric tilt system for more ergonomic part presentation. Designed to hold pallets, this cart lets employees load skidded parts with the cart in flat position, transport the cart to the work center, then tilt the load.

Locking casters provide a solid base. Replace the casters with optional floor mounts to make this cart a fixed part of your assembly line.

Custom

Because your products and processes are unique, your production challenges are too.

Our in-house design team can create custom solutions on any BUILT product, ensuring that your order meets your goals and precise specifications.
